

Double up against endotoxemia in horses with **ENDOVAC-Equi[®] Vaccine** and **ENDOSERUM[®] Antiserum**

Proven protection you can count on.

ENDOVAC-Equi[®] adds active protection.

The combination of a core antigen bacterin with IMMUNE Plus, an immune stimulant, provides better performance than bacterin alone.

Horses vaccinated with ENDOVAC-Equi[®] develop anti-endotoxin antibodies that **protect against diseases** such as:

- colic
- CHO laminitis
- diarrhea
- enteritis
- septicemia
- dyocisa
- metritis
- abdominal surgery complications

Passive treatment.

Horse owners know all too well that health problems can happen quickly and without notice. It is impossible to prevent conditions such as a blocked intestine or a retained placenta.

But owners can protect their horses against lethal endotoxins that are released in such a crisis. ENDOSERUM[®] contains high levels of antibodies that begin to neutralize endotoxins immediately upon administration.

Give your horse the protection it needs before a problem happens.

For more information about ENDOVAC-Equi[®] and ENDOSERUM[®], please contact your veterinarian, visit www.immvac.com or call (800)944-7563.
