

Cross protection with one vaccine.

“ENDOVAC-BOVI is a very powerful product in my practice. In my experience, two doses administered to the prepartum cow at the appropriate time has had tremendous advantages in increasing the quality of colostrum. The adverse clinical signs associated with acute coliform mastitis appear to be decreased. In a day when it is crucial to get as many cows pregnant in a timely manner, and to generate as many replacements as possible; it is necessary to have a dependable resource. ENDOVAC-Bovi is an important and beneficial management tool in my herd health practice.”
