

There's no substitute for

Trust.

"In 1992 we suddenly experienced significant death loss in our calves as a result of a Salmonella outbreak. After collaborating with our herd veterinarian, Dr. Randall Spare, and conducting our own research, we initiated a treatment regimen and vaccination protocol using ENDOVAC-Bovi®. At the time ENDOVAC-Bovi was commonly used in dairies on the West Coast. Since then, ENDOVAC-Bovi has been included in Gardiner Angus Ranch's herd health program. We have not lost a calf due to Salmonella in 18 years."

— Mark Gardiner, Gardiner Angus Ranch

There are many demands made on beef producers today. Trusting the science and the products used to keep calves alive, vigorous and healthy are as important as the trust placed in the best ranch hand or the most reliable working horse.

ENDOVAC-Bovi with IMMUNE Plus offers unprecedented cross protection against the most prevalent disease pathogens—E. coli, Salmonella, Pasteurella and Mannheimia.

Protecting herd health with ENDOVAC-Bovi begins with a call to your veterinarian.
