

# Put the play back in puppies with **SEPTI-serum**<sup>®</sup>

## Parvovirus enteritis is tough - but SEPTI-serum<sup>®</sup> is tougher.

Research identifies 90 percent of parvovirus infections as gram-negative endotoxemias, which SEPTI-serum<sup>®</sup> from IMMVAC Inc. effectively neutralizes.<sup>1</sup>

Intravenous administration is recommended at a dosage of 2-4 mL per pound of body weight. SEPTI-serum<sup>®</sup> should be warmed to body temperature, diluted with at least 1:1 with any sterile isotonic solution and administered slowly not in less than 30 minutes. SEPTI-serum<sup>®</sup> is easy to store, handle and use. The 50 mL bottles have a 36-month shelf life if properly refrigerated.

## Give puppies the treatment they need.

For more information about SEPTI-serum<sup>®</sup> please contact your veterinarian, visit [www.immvac.com](http://www.immvac.com) or call (800)944-7563.
